

Home Energy Challenge - Scavenger Hunt Edition

Families embark on an energy scavenger hunt to learn more about energy use in their home.

What will students learn?

The Home Energy Challenge - Scavenger Hunt Edition and accompanying lessons about home energy conservation and efficiency will engage families in learning about the energy they use at home.

Using lessons and tools like the Kill A Watt® meter, families seek out Phantom Loads, learn about energy-efficient lighting choices and find drafts around the home.

All materials needed to participate in the scavenger hunt are included in the kit provided by Eversource.
